

BIODIVERSITY POLICY

BIODIVERSITY POLICY

Biodiversity is the cornerstone of the Earth's community of life, playing a vital role in maintaining ecological balance and the long-term well-being of humanity. LONGi Green Energy Technology Co. (hereinafter referred to as "LONGi") firmly believes that protecting the natural ecosystem is a core element in achieving a sustainable future. We actively respond to the United Nations Sustainable Development Goals (UNSDGs), the Ten Principles of the UN Global Compact (UNGCG), the Kunming-Montreal Global Biodiversity Framework, and China's overall plan for ecological civilization construction. Committed to safeguarding the ecological health of land and water areas, we continuously enhance the effectiveness of ecological protection through multi-stakeholder collaboration, dedicated to preserving the integrity and vitality of global biodiversity.

I. Scope of Application

This policy applies to all employees of LONGi Green Energy Technology Co. and its branches, including its subsidiaries and holding subsidiaries. In addition, we encourage suppliers, contractors, and other partners to actively comply with this policy.

LONGi oversees and implements the company's biodiversity policy through the Board's Strategy and Sustainable Development Committee, systematically promoting biodiversity conservation efforts, deliberating on biodiversity-related strategies and objectives, and supervising their execution. LONGi's management and environmental management-related departments work collaboratively. The EHS Management Department is responsible for advancing, implementing, and evaluating specific plans for each management requirement in the policy, ensuring that LONGi and its subsidiaries' operational activities comply with the policy's requirements. We plan to use biodiversity risk screening tools such as the World Wide Fund for Nature (WWF) and the Integrated Biodiversity Assessment Tool (IBAT) to regularly assess biodiversity risks and opportunities in the company's operations, integrate ecological protection requirements into the entire process of our decision-making and operations, and conduct regular internal audits and performance evaluations.

II. Our Commitments

LONGi solemnly commits to strictly abiding by national and international laws and regulations related to biodiversity conservation in all business activities, actively practicing the concept of ecological civilization, and taking "priority on mitigation, systematic protection, and multi-stakeholder participation" as the core principles throughout the entire process of our decision-making and operations. We promise to achieve the long-term goals of "No Net Loss" of biodiversity and "No Gross Deforestation" by 2050, and the "Net Positive Impact" goal by 2060. The specific commitments are as follows:

1. LONGi ensure that all production operations and project development activities do not cause net loss of biodiversity.
2. LONGi commit to achieving no gross deforestation, and do not carry out or participate in activities that cause damage to natural forests.
3. LONGi will not conduct any form of operations in World Natural Heritage sites, ecological sensitive areas, fragile areas and their buffer zones.
4. LONGi prohibit carrying out activities that do not conform to the management objectives in protected areas and other regions with important biodiversity values.
5. LONGi require all our own operations and supply chain partners to jointly abide by the above commitments and earnestly put them into action.

III. Our Actions

To achieve the above commitments, LONGi follows the "Mitigation Hierarchy" principle (Avoid - Reduce - Regenerate - Restore - Transform), dedicated to avoiding and minimizing negative impacts on nature, and systematically promoting ecological regeneration, restoration, and systemic transformation. Our biodiversity actions include but are not limited to the following aspects:

1. Avoid Negative Impacts:

During the early planning and site selection process, LONGi fully consider the sensitivity and risks of biodiversity. All new and existing production and business activities will strictly avoid various statutory protected areas, ecological red line regions, World Natural Heritage sites, and natural areas with

important ecological functions or vulnerability during site selection and operation. This includes but is not limited to threatened ecosystems, key species habitats and foraging areas, wildlife migration corridors, high-biodiversity value regions, and other natural areas that should be protected by law and regulations, preventing disturbances and damage to natural habitats and biodiversity from the source.

2. Implement Green and Low-Carbon Operations

LONGi continues to promote energy cleanization, resource recycling, and pollution minimization, strengthens water resource and waste management, reduces the ecological footprint of the enterprise, and alleviates pressures on regional biodiversity.

3. Implement Ecological Protection and Restoration Projects

LONGi scientifically carries out key projects such as afforestation and ecological restoration under the framework of the national ecological protection red line, so as to enhance the stability of regional ecosystems and species diversity.

4. Strengthen Collaborative Supply Chain Management

LONGi incorporates biodiversity conservation requirements into the supplier code of conduct, advocates for and supports suppliers and business partners to set biodiversity protection goals, jointly promotes the construction of a green supply chain, advocates green procurement and responsible operations, and makes concerted efforts to reduce negative impacts on nature throughout the value chain.

5. Promote Scientific Research Cooperation and Technological Innovation

LONGi strengthens cooperation with research institutions and non-governmental organizations, supports the research and development of nature-based solution technologies, and enhances the adaptive and carbon sequestration capabilities of ecosystems.

6. Carry out Public Awareness and Education, and Promote Public Participation

LONGi regularly organizes ecological protection training for employees, supports biodiversity science popularization and environmental public welfare activities, and enhances the awareness of ecological civilization among internal and external stakeholders.

IV. Complaint Mechanism

We have established clear and systematic procedures to investigate and address biodiversity-related complaints. A professional investigation team, including external experts if necessary, ensures the independence and fairness of the process. The procedure includes complaint receipt, evaluation, investigation, conclusion, and fair implementation of corrective actions and penalties, without bias based on an employee's status or other factors.

We provide anonymous and secure complaint channels such as WeChat, hotline, email, and our website to ensure all reports are handled promptly, fairly, and confidentially. We value feedback from all stakeholders and encourage employees and others to raise questions and provide input regarding the content and application of this policy through the following channels:

- Communication Suggestions: chair@longi.com (Chairman's Mailbox)
- Longi Qingfeng Complaint and Report Acceptance Center WeChat mini program
- Sunshine Longi WeChat official account
- Tel: 0086-029-84193391, 18089282003
- Email: audit@longi.com; compliance@longi.com
- Letters and face-to-face complaints and reports, address: No. 8369, Shangyuan Road, Economic and Technological Development Zone, Weiyang District, Xi'an City, Audit Supervision Center of Longi Green Energy Technology Co., Ltd.

This policy has been deliberated and approved by the Board of Directors of LONGi. We will conduct a comprehensive review of the policy at least once a year. When necessary, revisions and improvements will be made to ensure its continued effectiveness.

LONGi Green Energy Technology Co., Ltd.
